Page last updated downdetector.com Today I decided to finally stop being such a freeloader and start actually paying for some manga and where better to start with the famous Crunchyroll that I see ads everywhere. I sign up on their site and I get a little annoyed that they want payment information for their free premium trial, but I digress. I download their manga app and I go and start reading. The first thing I noticed is that the default page change option is to scroll from left to right; no problem I thought I'd just use the volume buttons instead that just changed my volume. A little annoyed I realized that I never looked at the settings, so maybe it's switch-able there, but no, nothing to do there. Well well, I'll keep giving it a shot, although so far this app is worse than all the free manga apps I've tried. At this point I realized that it is not recently read or something like that so I have to look for manga I read and when I found it does not continue where you left so I have to All the way down to get to the oldest chapters and find out where I left off. I read some and while (for me) me) swipe, no way to change the page with volume buttons, and that the next chapter is not preinstalled I still try to enjoy the application. After a while I decided to leave the app and browse the internet, and when I re-enter the app I noticed something seems turned off, the actual site and the site application thinks I'm on is out of sync. Well well I think I think it's a problem with how the app downloads the site so I'll just pre-download them, which I at this point realize is not an option, and as a person who reads on a tablet with only a wi-fi app just became useless when I want to read while traveling. So my impression so far from this app is terrible, how can it be a premium manga option when it's much worse in every aspect? I'll probably keep my subscription for a while longer, but if that's how the app will continue in the future then I'm out. Page 2 of the 25 comments I've used Crunchyroll Manga for over three years at this point, and while I love different series and enjoy reading within the app, the actual app itself has tons of problems, and feels like it hasn't changed or improved in three years. The biggest problem is the large number of times that errors in the application require me to remove and redownload the application in order to get it to work again. Other little things like updates use the full screen on the iPhone X and above, and have a notification or way to see from the list which series have updates without clicking on each one individually. Long story short, I use this app to be able to read manga legitimately and make sure the creators get paid to make their content, but often times feel like I've been punished for how pretty much every manga pirating app has a better overall experience. I hope Crunchyroll at some point decides to put more resources into this app so it can compete with the free options out there. There.
